Natural Gas Notes:
1. If you turn off the gas at the meter have the utility company turn it back on. They can also assist you with checking the rest of the system, and restarting pilot lights.
2. Anything that disturbs the soil around underground gas pipes can cause ruptures in lines. This includes heavy items striking the ground above and earthquakes. Not all natural gas lines have gas that smells like rotten eggs. Signs of ruptured underground lines are: blowing or hissing sound, dead or discolored vegetation in an otherwise green area, dirt or dust blowing from a hole in the ground, bubbling in wet or flooded areas, flames if a leak has ignited.

VACATE THE AREA ON FOOT IMMEDIATELY
